Exhibitor Introduction (Within 200 words)	Kimoto's Cultivated surface technology allows the company to continue providing products to key industries which support our advanced information society.
Exhibit Description (Within 200 words)	<p>Our company has been developing advanced film surface to display, car, and lighting industry in whole over the world. Today, we would be here with our high quality product for lighting and car application. Our excellent new product brand 'OptSaver' has been developed for lighting application and those films are optimized for OLED and LED light application. The customer can get more high efficiency and homeomerous light energy distribution on OLED lighting with our STE3 or STC3. For the LED lighting, 'OptSaver L-series' offers wide range of Half width at half maximum with high transparency and well-controlled quality.</p> <p>We would offer our product 'Carbonefeather', 'Light-up', and 'KB film' for car application. 'Carbonefeather' can offer very stable tolerance of thickness with very thin total thickness and also shut light down almost 100 %, 'Light-up' does have long term experience at the Automotive industry as diffusion film for LED display, and 'KB film' is</p>

	<p>for membrane switch application for the new generation of car.</p> <p>We are also offering transfer technology for light application.</p> <p>Please feel free to visit our booth.</p>
