Professor Uijong Ju
(Kyung Hee University, Republic of Korea)

Uijong Ju is an assistant professor in the Department of Information Display, Kyung Hee University since 2021. He received his Ph.D. in Brain and Cognitive engineering from Korea University in 2019 with a work on using Virtual Reality to study human cognition. After finishing his PhD, he worked as a research professor at Korea University before joining Kyung Hee University.

His current research interests include the employ a multimodal approach, combining behavioral, psychophysiological, and imaging experiments with virtual reality (VR) technology for realistic simulation of complex situations, with the goal of ultimately designing artificial intelligence (AI) systems that can cope smartly with emergency situations, as for example would occur during autonomous car driving.
