Exhibitor Introduction	Korea Conformity Laboratories (KCL) is a leading public testing and certification institute in Korea, providing reliability testing and technical support to enhance self-reliance and quality improvement in the materials, components, and equipment industries. As a member of the Korean research Alliance in Support for Technological Innovation (KASTI), KCL conducts reliability evaluation and technical support to enhance competitiveness in the materials, components, and equipment sectors.	
Exhibit Description	The KCL Reliability Center is equipped with advanced infrastructure and testing instruments for accelerated life testing, environmental simulation, and failure analysis. Utilizing these capabilities, the center supports companies in securing product reliability and accelerating commercialization. This exhibit will focus on introducing key testing equipment and reliability evaluation services tailored to industry needs.
